**QUARTERLY GROUND-WATER MONITORING**  
**FOURTH QUARTER 2003 – 1<sup>st</sup> ROUND**  
**Remedial Investigation/Feasibility Study**  
**Astoria Area-Wide Petroleum Site**  
**Astoria, Oregon**  
**DEQ ECSI File #2277**

Dear Ms. Coates:

This Technical Memorandum presents the results of ground-water monitoring completed in October 2003 for the Remedial Investigation/Feasibility Study (RI/FS) at the Astoria Area-Wide Petroleum Site. The site location is shown on Figure 1 and a site plan is shown on Figure 2. The fieldwork was performed at the site from October 13 through October 23, 2003, in accordance with the Work Plan Addendum, Phase 1 Ground Water Assessment (*EnviroLogic Resources*, 2003b). This technical memorandum presents the analytical results of the first ground-water sampling event (Fourth Quarter 2003). The field sampling activities were performed by *EnviroLogic Resources, Inc.*.

Ground-water samples were collected and analyzed for all COIs from all of the monitoring wells during the initial ground-water sampling event, excluding wells that contained free-phase hydrocarbons. A total of 57 samples from 47 wells, including MW-2(M), MW-6(M), MW-7(M), MW-10(M), MW-11(M), MW-12(A) through MW-24(A), MW-26(A) through MW-48(A), MW-1(F), and R-1(M), were collected for laboratory analysis. Sampling methods, containers, preservatives, and holding times for each analytical method are provided in the Field Sampling Plan (Appendix A of the RI/FS Work Plan [*EnviroLogic Resources*, 2002b]). In addition, specific procedures used during the sampling event are presented in Appendix A of this document. The locations of the monitoring wells and recovery wells are shown on Figure 3.

The following field parameters were measured as part of the quarterly monitoring event: pH, temperature, specific conductance, oxidation-reduction potential (ORP), and dissolved oxygen (DO). Ground-water sampling logs are presented in Appendix B. Samples of light nonaqueous phase liquid or “product” was collected from monitoring wells MW-3(M), MW-4(M), MW-8(M), and MW-9(M) during this monitoring event for analysis of specific gravity.

Ms. Anna Coates  
March 15, 2004  
Page 2

Appendix A (Field Sampling Plan, FSP) of the RI/FS Work Plan outlined the methods and procedures, which were to be followed while sampling ground water from the monitoring wells at the Astoria Area-Wide site. Modifications to these methods and procedures are documented below:

- No field filtering for metals samples was conducted at wells MW-10(M) and MW-1(F) because of equipment access issues; and
- No field duplicate sample was collected for first batch shipped to the laboratory.

### **SUMMARY OF THE FOURTH QUARTER 2003 SAMPLING EVENT**

A total of 46 monitoring wells and one recovery well were included in the Fourth Quarter 2003 sampling event. The measured potentiometric surface and chemical concentration data representing the key or indicator COIs are presented in the following sections.

The ground-water flow direction at the Astoria Area-Wide site is generally to the northwest and toward Pier 2. A map showing the potentiometric surface is presented on Figure 3. The ground-water elevation data are presented in Table 1. Ground-water elevations have been corrected for the presence of free product using either the measured specific gravity in the well, or 0.87.

A total of 57 water samples were submitted for analysis during this first round of sampling. This included 43 field samples, 2 field duplicates, 2 equipment blanks, and 10 trip blanks. Table 2 shows the chemicals detected and the range of concentrations observed in monitoring wells during the sampling event. Ground-water analytical results from the Fourth Quarter 2003 round of sampling are summarized in Tables 2 through 9. Figures 4 through 7 show the monitoring well locations along with detected concentrations of select petroleum constituents, including iron. Laboratory analytical data sheets, QA/QC data, the data validation report, and chain-of-custody forms for this ground-water sampling event are presented in Appendix C. Data have been qualified where detections in blanks (e.g., laboratory method blanks or equipment blanks) affect the reported analytical result. No data were rejected as a result of the data validation.

The depth to product, product thickness, and depth to water are measured monthly using an interface probe. The product measurement data through the Fourth Quarter 2003 is included in Table 1. Monitoring wells MW-1(M), MW-3(M), MW-4(M), MW-8(M), and MW-9(M) contain measurable product. A petroleum sheen was observed in MW-41(A). The product thickness in the wells varies month to month and product is pumped out of these wells on a monthly basis. The volume of product recovered from these monitoring wells through December 2003 is presented in Table 10.

### **NEXT MONITORING EVENT**

In accordance with the approved ground-water monitoring program, the next or second quarterly ground-water monitoring event was completed in January 2004. A technical memorandum summarizing the results of the January 2004 ground-water monitoring event will be submitted to DEQ in March 2004.

---

Ms. Anna Coates

Silver	43	2	5	0.18
Calcium	26	26	100	136 mg/L
Chloride	26	26	100	54.5 mg/L
Iron	41	41	100	68.3 mg/L
Magnesium	26	26	100	46.8 mg/L
Manganese	26	26	100	10.5 mg/L

**TABLE 3**  
**DATA QUALIFIER DEFINITIONS**

Remedial Investigation/Feasibility Study  
Astoria Area-Wide Petroleum Site  
Astoria, Oregon

---

- U** The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J** The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- UJ** The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- J+** The analyte was positively identified; the associated numerical value appears to be bias high.
- J-** The analyte was positively identified; the associated numerical value appears to be bias low.
- UJ-** The analyte was not detected above the reporting limit. However, the reporting limit appears to be bias low and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- C** Common laboratory contaminant
- B** The analyte was also identified in a field or laboratory blank associated with this sample or sample group.
- R** The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
-

***APPENDIX A***

***METHODS AND PROCEDURES***

**APPENDIX A**  
**METHODS AND PROCEDURES**  
**GROUND-WATER SAMPLING**

Standardized methods and procedures were developed prior to commencement of field activities. This protocol helped to control the quality of samples collected and helped to protect the health and safety of all site personnel. Quality-assurance protocols utilized are discussed in detail in the Quality Assurance Project Plan (QAPP) in Appendix B of the RI/FS Work Plan. Sampling procedures and protocols for each sampling activity were developed to meet the project data quality objectives and were based on proven and acceptable sampling methods as established by EPA guidance documents, Oregon state regulations, and professional judgment.

*EnviroLogic Resources, Inc.*, performed all ground-water sampling and related activities. Ground-water level measurements were recorded from the monitoring wells at the start of the sampling event.

Ground-water samples were collected from 47 wells. The monitoring wells were first checked for free product, water levels were measured, and then approximately 3-borehole volumes of ground water were removed. Wells were purged using an ES-40 purge pump connected to clear vinyl PVC tubing. The water was transferred into a 250-gallon tote. Once the appropriate amount of water was purged from the well, the pH, temperature, and conductivity were measured continuously until stabilization using an Oakton meter. If the well was purged of all water, then the purging process was considered complete. Once ground water recovered or the field parameter readings were stable, the DO was measured down hole using a YSI 55 DO meter. Next, ground water was sampled with a weighted disposable PVC bailer to fill the VOA bottles. After filling the VOA bottles, polyethylene tubing was inserted into the well and connected to silicon tubing, and ground water was sampled through this tubing into the appropriate bottles using a Model 410 Solinst peristaltic pump. Finally, ground water was collected into a glass beaker and field parameters (pH, temperature, conductivity, and ORP) were measured and recorded.

The ORP was measured with an ORPTestr. Field parameters are presented on the Ground-Water Sampling Logs in Appendix B. The tubing was left inside the well casing to be used during the next sampling event, and the well was closed. When the tote was full of purged water, the water was pumped into a 4,000-gallon Baker tank, which is stored near the bank at the base of Slip 2.

Product was sampled using polyethylene tubing and a peristaltic pump. The tubing was held at the elevation of the product to collect only product to the extent possible. The product was contained in 8-ounce glass jars, which were sealed in plastic bags, then stored in a cooler with ice until delivered to the laboratory. Product was analyzed at North Creek Analytical, Inc., in Beaverton, Oregon, and the Shell Oil research laboratory in Houston, Texas.

Investigation derived waste (IDW), including purged and decontamination water are stored on-site in one staging area. The water is stored in a 4,000-gallon Baker tank. Samples of the water in the Baker Tank were collected and analyzed to compare concentrations to the discharge limits set by DEQ in a letter dated August 27, 2003. The concentrations of constituents in the decontamination and purge water were below discharge limits and the water was discharged from the Baker tank to a nearby storm water catch basin that has an outfall in Slip 2.

Field equipment blanks were collected and analyzed along with laboratory method blanks to evaluate whether the analytical results are representative of the sampled material and not influenced by non-site related contamination. Laboratory QC samples included laboratory matrix or method spikes, laboratory matrix spike duplicates, laboratory duplicates, and laboratory method blanks. These are described in Appendix B of the RI/FS Work Plan (*EnviroLogic Resources*, 2002b).

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: R-1(M)

Sampled By: Melanie Bocianowski, Alex Shook

Date: 10/22/2003	Sample Number: R-1(M)
Time Sample Collected: 1340	Well or Boring No.: R-1(M)

COC and RFA No.:

Static Water Level: 4.55 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 50 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer

Pump intake depth:

Discharge rate during sampling:	DO: 5.3 %
Color: Transparent light grey to clear	Temperature: 17.2 deg C
Turbidity: Medium cloudy	ORP: 162 mV
Conductance: 104 µS	pH: 7.39
Odor: None	Other:

Analysis Requested:

Comments:

Tubing would not go down well, therefore no field filtering. Silting caused purging to stop.

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-2(M)

Sampled By: Melanie Bocianowski, Alex Shook

Date: 10/15/2003	Sample Number: MW-2(M)
Time Sample Collected: 1300	Well or Boring No.: MW-2(M)

COC and RFA No.:

Static Water Level: 8.62 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 70 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: 7.3 %
Color: Mostly clear	Temperature: 15.7 deg C
Turbidity: Clear	ORP: -21 mV
Conductance: 253 µS	pH: 6.91
Odor: Slight	Other:

Analysis Requested:

Comments:

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-6(M)

Sampled By: Melanie Bocianowski, Alex Shook

Date: 10/22/2003	Sample Number: MW-6(M)
Time Sample Collected: 1530	Well or Boring No.: MW-6(M)

COC and RFA No.:

Static Water Level: 7.00 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 56 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: 10.4 %
Color: clear	Temperature: 15.7 deg C
Turbidity: Clear	ORP: 9 mV
Conductance: 120 µS	pH: 7.28
Odor: None	Other:

Analysis Requested:

Comments:

# ***EnviroLogic Resources, Inc.***

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-7(M)

Sampled By: Melanie Bocianowski, Nancy East-Smith

Date: 10/13/2003	Sample Number: MW-7(M)
Time Sample Collected: 1547	Well or Boring No.: MW-7(M)

COC and RFA No.:

Static Water Level: 8.27 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 70 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: 7.6 %
Color: clear	Temperature: 16.8 deg C
Turbidity: Clear	ORP: 0.43 mV
Conductance: 414 µS	pH: 6.73
Odor: None	Other:

Analysis Requested:

Comments:

# ***EnviroLogic Resources, Inc.***

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-10(M)

Sampled By: Melanie Bocianowski, Alex Shook

Date: 10/15/2003	Sample Number: MW-10(M)
Time Sample Collected: 1500	Well or Boring No.: MW-10(M)

COC and RFA No.:

Static Water Level: 10.85 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 50 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer

Pump intake depth:

Discharge rate during sampling:	DO: 12.8 %
Color: Transparent light gray	Temperature: 15.2 deg C
Turbidity: Slightly murky to clear	ORP: -34 mV
Conductance: 330 µS	pH: 6.72
Odor: Slight	Other:

Analysis Requested:

Comments:

Tubing would not go down well therefore no field filtering

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-11(M)

Sampled By: Melanie Bocianowski, Alex Shook

Date: 10/15/2003	Sample Number: MW-11(M)
Time Sample Collected: 1720	Well or Boring No.: MW-11(M)

COC and RFA No.:

Static Water Level: 10.41 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 60 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: n/a
Color: Mostly clear	Temperature: 13.9 deg C
Turbidity: Clear	ORP: -37 mV
Conductance: 161 µS	pH: 6.86
Odor: Slight to medium	Other:

Analysis Requested:

Comments:

Started with grey (sandy) water, strong odor; Cleared by end of sampling with less odor

# ***EnviroLogic Resources, Inc.***

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-12(A)

Sampled By: Melanie Bocianowski, Alex Shook

Date: 10/22/2003	Sample Number: MW-12(A)
Time Sample Collected: 955	Well or Boring No.: MW-12(A)

COC and RFA No.:

Static Water Level: 19.61 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 12 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: 9.1 %
Color: clear	Temperature: 15.9 deg C
Turbidity: Clear	ORP: 130 mV
Conductance: 357 µS	pH: 7.28
Odor: None	Other:

Analysis Requested:

Comments:

Orange water at start of pumping

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-14(A)

Sampled By: Melanie Bocianowski, Nancy East-Smith

Date: 10/21/2003	Sample Number: MW-14(A)
Time Sample Collected: 1645	Well or Boring No.: MW-14(A)

COC and RFA No.:

Static Water Level: 14.70 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 20 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: 17.3 %
Color: clear	Temperature: 16.1 deg C
Turbidity: Clear	ORP: 203 mV
Conductance: 170 µS	pH: 6.73
Odor: None	Other:

Analysis Requested:

Comments:

Well went dry after 20 gallons purged.

# ***EnviroLogic Resources, Inc.***

## **WATER SAMPLE LOG**

Project Number: 10077.004

Project Name: Astoria Area-Wide Petroleum Site – 4<sup>th</sup> Quarter 2003

Facility: Astoria Area-Wide

Locator: MW-15(A)

Sampled By: Melanie Bocianowski, Nancy East-Smith

Date: 10/20/2003	Sample Number: MW-15(A)
Time Sample Collected: 1340	Well or Boring No.: MW-15(A)

COC and RFA No.:

Static Water Level: 8.87 feet dtw	Time:
Well Depth:	Date Drilled:
Filter Pack Thickness:	Casing or "Geoprobe" Diameter:
Amount Purged: Approx. 60 gallons	Bailer or Well Point Depth:

Sample Collection Method:

Bailer and peristaltic pump

Pump intake depth:

Discharge rate during sampling:	DO: 6.7 %
Color: clear	Temperature: 15.8 deg C
Turbidity: Clear	ORP: -52 mV
Conductance: 424 µS	pH: 7.24
Odor: Fresh "strong gas" odor	Other:

Analysis Requested:

Comments:

Occasional sheen on water

# ***EnviroLogic Resources, Inc.***

***LABORATORY ANALYTICAL REPORTS  
WITH DATA VALIDATION REPORTS***

**MEMORANDUM****To:** **File – 10077.004****From:** **Nancy East-Smith****Date:** **November 25, 2003**

**Subject:** **QUALITY ASSURANCE/QUALITY CONTROL REVIEW**  
**First Complete Ground Water Sampling Event - 4<sup>th</sup> Quarter 2003**  
**ASTORIA AREA WIDE SITE**

---

This report presents the results of our review of laboratory analytical reports and the data validation conducted based on the laboratory reports. The samples were collected on October 13, 14, 15, 16, 17, 20, 21, 23, 2003, as part of the first complete ground-water sampling event after the installation of the ground-water monitoring wells at the Astoria Area-Wide Petroleum Site. Sample handling, analysis and quality control (QC) procedures were established in the July 15, 2002, Remedial Investigation/Feasibility Study, Astoria Area-Wide Petroleum Site, Astoria, Oregon, Phase I Work Plan (Phase 1 RI/FS) and the Work Plan Addendum, Phase 1 Ground Water Assessment, Astoria Area-Wide Petroleum Site, Astoria, Oregon, DEQ ECSI File #2277. Both documents were prepared by *EnviroLogic Resources, Inc.* The samples were submitted to North Creek Analytical, Inc., (NCA) of Beaverton, Oregon, for analysis.

A total of 57 water samples were submitted for analysis. This included 43 field samples, 2 field duplicates, 2 equipment blanks and 10 trip blanks. The samples were submitted in 4 groups, each group was assigned a lab order number. Basic information about each lab order number is presented below:

Lab Order	Number of Samples	Sample Type	Date Collected	Field Locations
P3J0539	9 3 1	Field Samples Trip Blanks Equipment Blank	10/13,14,1 5/2003	MW-7, MW-43, MW-47, MW-33, MW-34, MW-41, MW-32, MW-48, MW-46
P3J0654	16 1 3	Field Samples Field Duplicate Trip Blank	10/15,16,1 7/2003	MW-42, MW-2, MW-10, MW-11, MW-30, MW-22, MW-35, MW-39, MW-31, BM-31, MW-45, MW-37, MW-40, MW-44, MW-17, MW-28, MW-26

P3J0775	16 1 1 3	Field Samples Field Duplicate Equipment Blank Trip Blanks	10/20, 21, 22/2003	MW-21, MW-19, BM-19, MW-20, MW-15, MW-16, MW-23, MW-38, MW-27, MW-36, MW-18, MW-24, MW-29, MW-14, MW-1, MW-13, MW-12,
P3J0859	2 1	Field Samples Trip Blank	10/22,23 /2003	MW-6, R-1

As stated in Appendix B, Sections 8.0, 9.0, and 10.0 of the Phase I RI/FS our goal was to review the laboratory reports and chain of custodies for Quality Assurance/Quality Control (QA/QC) parameters and statistical parameters. The findings of our review are presented in the following pages. Qualified data is presented in the attached tables. Analyses performed are listed below.

Analysis	Reference
Gasoline Hydrocarbons	NWTPH-Gx
Diesel and Heavy Range Hydrocarbons	NWTPH-Dx
Total Metals	EPA Method 6000/7000
Dissolved Metals	EPA Method 6000/7000
Volatile Organic Compounds (VOCs)	EPA Method 8260B
Polynuclear Aromatic Compounds (PAHs)	EPA Method 8270M-SIM
Conventional Chemistry (Nitrate/Nitrite-Nitrogen)	EPA Method 353.2
Anions	EPA Method 300.0
Total Alkalinity by Conventional Chemistry Parameters	EPA Method 2320B

EPA = U.S. Environmental Protection Agency

NWTPH = Northwest Total Petroleum Hydrocarbons

SIM = Selected Ion Monitoring

## CHAIN OF CUSTODY REVIEW

Chain of custodies (COC) were reviewed to determine sample condition upon arrival at the lab, to determine if analysis requested was in accordance with the RI/FS Work Plan, and that analyses requested were performed.

- Two special conditions were noted on COCs to indicate sample containers were broken or otherwise in an adverse condition upon arrival at the laboratory. For MW-14(A) the cap on one of the 1-liter amber jars was cracked and one sample jar for MW-2(M) was broken.

- Cooler temperatures recorded at the laboratory upon receipt ranged from -0.6°C to 11.4°C.
- Analyses requested on the COC generally reflect the analysis presented in the laboratory reports. However, modifications to analytical requests made subsequent to the initial COC submittal were not noted on the submitted COC. Although, the COC does not completely reflect analyses presented in the report our review indicates that the analyses conducted were requested and that no requested analysis was omitted.

## QUALITY CONTROL/QUALITY ASSURANCE REVIEW

### DATA QUALIFIERS

The following data qualifiers are used in this data validation report:

- **B.** The analyte was also identified in a field or laboratory blank associated with this sample or sample group.
- **J.** The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- **J+.** The analyte was positively identified; the associated numerical value is the estimated high of the analyte in the sample
- **U.** The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

The attached tables present the original result and the qualified result for all analyses that were qualified. The tables are organized by analytical method and only qualified analytical results are included.

### HOLDING TIMES

We reviewed the laboratory reports and compared sample dates, prepared dates and analyzed dates for all the analyses. No holding time exceptions were noted.

### FIELD BLANKS

#### Equipment Blanks

Equipment blanks were analyzed at the required frequency. A total of two equipment blanks were submitted for analysis of gasoline range hydrocarbons and VOCs. One equipment blank was obtained by running de-ionized water through a sample bailer and a second equipment blank was obtained by running de-ionized water through sample tubing used with the low flow sample pump. Toluene was detected in the bailer equipment blank as noted below.

Analyte	Detected Concentration	MDL	RL
Toluene	0.290J µg/l	0.155 µg/l	0.500 µg/l

MDL = Method Detection Limit

RL = Reporting Limit

ug/l = micrograms per liter

Water samples which had this analyte detected within 5 times the concentration detected in the equipment blank are qualified with a UB flag and reported at the RL if the concentration was less than the RL or qualified with a JB flag (at the detected concentration) if the concentration is greater than the RL. Where field samples had analytes detected at concentrations greater than the 5 times the data is not qualified. Laboratory dilution of field samples was considered.

### **Trip Blanks**

A total of 10 trip blanks were submitted for VOC analyses with the 4 lab orders. The trip blanks were provided by the laboratory and consisted of water in a 40 ml clear VOA (volatile organic analysis) vial.

The only analytes detected in a trip blank were for sample group P3J0859, naphthalene and 1,2,4-trimethylbenzene were detected as noted below.

Lab Order	Analyte	Detected Concentration	MDL	RL
P3J0859	Naphthalene	0.390J µg/l	0.0989 µg/l	2.00 µg/l
P3J0859	1,2,4-Trimethylbenzene	0.110J µg/l	0.0884 µg/l	1.00 µg/l

Water samples that had this analyte detected within 5 times the concentration detected in the trip blank (for the same sample delivery group) were qualified. If the detected concentration was less than the RL the detected result was reported at the RL and qualified with a UB flag. If the detected concentration was greater than the RL (but still within 5 times) the detected concentration is qualified with a JB flag. Where field samples had analytes detected at concentrations greater than the 5 times the data is not qualified. Laboratory dilution of field samples was considered.

### **Laboratory Method Blanks**

Laboratory method blanks were analyzed at the required frequency. Laboratory blanks were performed on sample batches so each blank is associated with a batch of field samples. The batch sample associated with each field sample is identified in the laboratory report. Analytes detected in laboratory blanks are noted below:

Lab Order/ Batch No.	Field Samples Qualified	Analyte Detected in Laboratory Blank	Analytical Method	Blank MDL	Blank RL
<b>P3J0654</b>

Field samples in the same batch that had analytes detected within 5 times the blank concentration (10 times for inorganics) are qualified by placing a J and B flag next to the detected concentration (J+ and B flag for inorganics) if the detected concentration is greater than the RL. Where the detected concentration is less than the RL, the RL value is reported with a UB flag (for both organics and inorganics). Data is not qualified where field samples had analytes detected at concentrations greater than 5 (or 10 times for inorganics) times the corresponding blank concentration. Laboratory dilution of field samples was considered.

## **SURROGATE RECOVERIES**

### **Field Samples**

One or more surrogates were utilized for each analysis except for metals, conventional chemistry, anions and total alkalinity. We reviewed all of the surrogate recoveries relative to the specified control limits and observed exceptions for 3 samples. Where surrogate recoveries were not within control limits batch specific QC information and laboratory notes were reviewed to evaluate the data. This evaluation resulted in no data being qualified due to surrogate recovery issues.

## **SPIKE AND SURROGATE RECOVERIES**

### **Laboratory Control Samples**

Laboratory Control Samples (LCS) were conducted at the required frequency. Based on our review all LCS quality control information was acceptable. No data was qualified.

### **Matrix Spike Samples**

Matrix Spike (MS) were conducted at the required frequency. Based on our review several spike compounds and/or surrogates did not meet quality control limits. Where

surrogate recoveries were not within control limits batch specific QC information and laboratory notes were reviewed to evaluate the data. This evaluation resulted in no data being qualified due to spike recovery issues.

## **LABORATORY AND FIELD DUPLICATES/RELATIVE PERCENT DIFFERENCE**

Field duplicate samples were obtained at the frequency of 3 for 43 field samples. Two duplicates were submitted for analyses the third field duplicate was utilized by the laboratory for QA/QC purposes. The field duplicate frequency set by the Work Plan was one for every 20 field samples. MSD, Laboratory Control Sample Duplicates (LCSDs), laboratory duplicates and field duplicate analytical information was reviewed. Based on our review several laboratory duplicate sample relative percent differences (RPDs) were not within acceptable limits. Where RPDs were not within control limits, batch specific QC information and laboratory notes were reviewed to evaluate the data. This evaluation resulted in no data being qualified due to RPD exceptions. MS/MSD exceptions for duplicate samples were included in the previous section. Field duplicate exceptions are noted below.

Lab Order	Sample	Analysis/ Sample Type	QC Exception	Comment
P3J0654	MW-31 and BM-31	Anions/Field Duplicate	RPD for sulfate was outside the control limit of 20.	One analyte result was already qualified as a result of blank data validation. No additional qualification was added.
P3J0775	MW-19 and BM-19	Total Metals/ Field Duplicate	RPD for arsenic was 24.5%. The control limit is 20%	The detected arsenic concentrations were within 5 times the RL. Generally RPD data is not evaluated for concentrations within 5 times the RL. No data is qualified

## **STATISTICAL EVALUATION**

### **Precision**

Precision is a measure of the ability to reproduce data and is evaluated using duplicate samples. This includes field duplicates, laboratory duplicates, MSDs and LCSDs. Relative percent difference (RPD) is used to measure the reproducibility as described in section 10.1 of Appendix B of the RI/FS Work Plan. The RPD control limits are listed in the laboratory reports. These control limits may be slightly different than those presented in the Work Plan, but they are still acceptable. Overall precision for the analysis was acceptable

RPD's outside the control limits would represent statistical exceptions and indicate a lack of ability to reproduce the data. LCSD evaluate the effect laboratory conditions have on precision -- no RPD exceptions were noted in LCSDs. Field duplicates, MSDs and lab duplicates evaluate the effect field and laboratory conditions have on precision. The only exceptions noted in the duplicates did not indicate there was an out-of-control condition

for the batch. Overall, the precision of the laboratory data is acceptable, and no data is qualified due to lack of precision.

### **Accuracy**

Accuracy measures the bias in a system and is evaluated using percent recovery of surrogate, spikes and LCS. LCS evaluates bias due to laboratory conditions. Bias due to field and laboratory conditions is evaluated using surrogates and matrix spikes. Our review indicates accuracy was acceptable.

### **Representatives**

Equipment blanks, laboratory blanks and field duplicate samples evaluate how representative analytical results are of actual site conditions. Blanks evaluate the introduction of “analytes” from outside sources such as field equipment, transportation equipment and the laboratory environment. In general there were some problems with laboratory and field equipment introducing analytes that were not representative of sample conditions. These problems are summarized here and were discussed in detail previously. Each of these problems should be addressed to prevent further non-representative samples during future phases of fieldwork.

- Toluene was noted in the equipment blank taken on 10/21/03. This equipment blank was obtained by running de-ionized water through a new disposable bailer. The toluene detection indicates there is either toluene in the de-ionized water or the disposable bailers.
- Nine different analytes were detected in the laboratory method blanks at concentrations above the MDL but below the RL. These detected analytes, as noted in the Laboratory Method Blank section of this report would not be considered representative of field conditions. In particular low concentrations of mercury and selenium were prevalent in the metals’ method blanks.

Duplicate field samples attempt to evaluate how representative a sample is of site conditions. Duplicate water samples met all QC criteria.

### **Completeness**

Completeness evaluates how successful the data set is at being valid. Our data group was 100 percent complete with respect to rejected analysis.

### Notes and Definitions

- A-01 Detected hydrocarbons appear to be due primarily to the overlap of gasoline, however, there is weathered diesel, as well as biogenic interference also present.
- D Data reported from a preparation or analytical dilution.
- D-17 Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- J Estimated value.
- Q-02 The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
- Q-03 The percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte already present in the sample.
- Q-06 Analyses are not controlled on RPD values from sample concentrations less than 5 times the reporting limit.
- Q-07 The recovery of this spike is outside control limits due to sample dilution required from high analyte concentration and/or matrix interferences.
- Q-15 Analyses are not controlled on matrix spike RPD and/or percent recoveries when the sample concentration is significantly higher than the spike level.
- R-03 The reporting limit for this analyte was raised due to matrix interference.
- U Analyte included in the analysis but not detected.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

### Notes and Definitions

- A-01 Detected hydrocarbons appear to be due to weathered gas as well as weathered diesel.
- A-02 Detected hydrocarbons are mainly due to overlap from the gasoline range; however, there appears to be some weathered diesel detected.
- D Data reported from a preparation or analytical dilution.
- D-15 Detected hydrocarbons have non-petroleum peaks or elution pattern that suggests the presence of biogenic interference.
- J Estimated value.
- Q-01 The spike recovery, and/or RPD, for this QC sample is outside of established control limits. Review of associated batch QC indicates the recovery for this analyte does not represent an out-of-control condition for the batch.
- Q-02 The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
- Q-03 The percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte already present in the sample.
- Q-03a The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte already present in the sample.
- Q-06 Analyses are not controlled on RPD values from sample concentrations less than 5 times the reporting limit.
- Q-08 Unable to quantitate spike recovery due to matrix interference and/or dilution necessary for analysis.
- R-03 The reporting limit for this analyte was raised due to matrix interference.
- R-05 Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- S-09 Surrogate recovery is outside control limits due to matrix interference.
- U Analyte included in the analysis but not detected.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Attention: Tom Calabrese

RE: Astoria Area-Wide Petroleum Site RI-1

Enclosed is the amended report for 8260 VOC analysis for samples received by the laboratory on 10/18/03. The original result submitted on 11/05/03 for sample **MW-10(M)** had a dilution error by a factor of 50X. The correct dilution factor should have been 2X. The amended report should show the correct dilution and a much lower result for VOCs specific compounds. For your reference, this analysis has been assigned our NCA work order # **P3J0654-03**.

Please call if you have any questions.

Respectfully,

  
Joy Chang  
North Creek Analytical-Portland

# NORTH CREEK ANALYTICAL COOLER RECEIPT FORM

(Army Corp. compliant)

Client: EnviroLogic Resources

1. Please sign for receipt and opening of 18 cooler or        other \_\_\_\_\_

By (print) Erica Dakan (sign) Sara M

2. Date samples received 10/18/03 Date opened: Same  or        /        /       

3. Delivered by:        NCA courier        FedEx        UPS        Courier  Client        Other         
Airbill # if applicable \_\_\_\_\_ (Put copy of shipping papers in file)

4. There were 0 custody seals present, signed by \_\_\_\_\_ date        /        /       .

5. Were the custody seals unbroken and intact at the date and time of arrival?        Yes        No

6. Was ice used?  yes        no Type of ice:        blue ice        gel ice  real ice  
Temperature (degrees C) see COC Raytek thermometer \_\_\_\_\_ Digi-Therm (probe temperature blank)

7. Are custody papers sealed in a plastic bag and taped inside to lid?  Yes        No

8. Were custody papers filled out properly (ink, signed, etc.)?  Yes        No  
If "no" please specify: \_\_\_\_\_

9. Was project identifiable from custody papers?  
Name of project Asphalt Area-Wide (if applicable)  Yes        No

10. Initial and date for unpacking: ED (initials) date 10/18/03

11. Packing material:        bubble wrap/bag        styrofoam        cardboard none other

12. Were samples in bags?  Yes        No

13. Did all containers indicated on the COC arrive?  
If "no" please indicate which containers were absent MW-LM broken  Yes        No

14. Were all containers unbroken and labels in good condition?  Yes        No  
If "no" please indicate which containers \_\_\_\_\_

15. Were all bottle labels complete (ID, date, time, signature, etc.)?

Do the IDs, times, etc. agree with the COC?

Yes        No

Yes        No

If "no" please indicate which containers \_\_\_\_\_

16. Are containers properly preserved for indicated analysis?  Yes        No

17. Is there adequate volume for the test(s) requested?  Yes        No

18. If vial vials were submitted, are they free of bubbles? N/A  Yes        No

19. Log-in phase: Date samples were logged in: 10/18/03 Elm Project # P350654

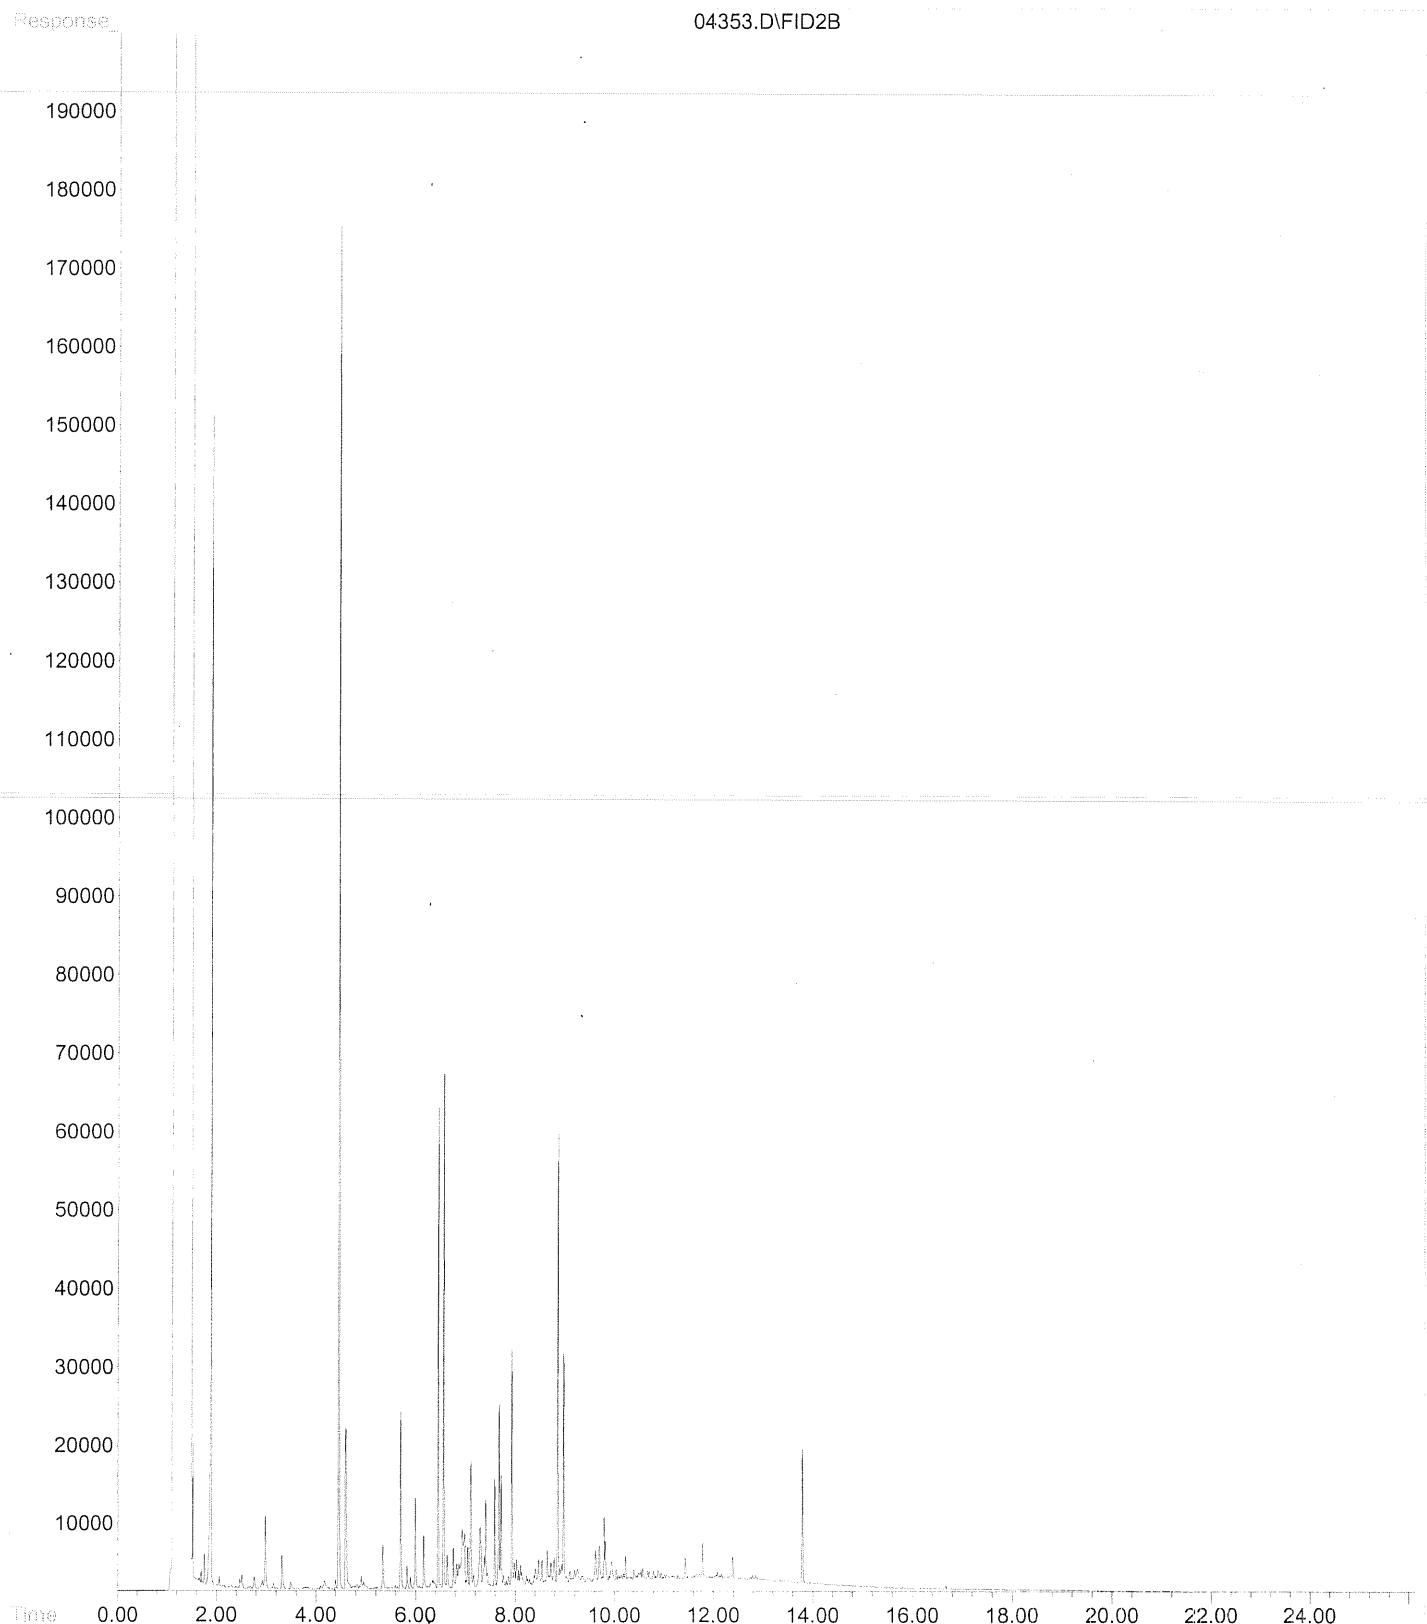

20. Logged in by (print) Erica Dakan (sign) Sara M

21. Was the project manager notified of status? (Use back of form as a record)        Yes        No

### Notes and Definitions

- A-01 Detected hydrocarbons are mainly due to overlap from the gasoline range; however, there appears to be some weathered diesel detected.
- D Data reported from a preparation or analytical dilution.
- D-15 Detected hydrocarbons have non-petroleum peaks or elution pattern that suggests the presence of biogenic interference.
- D-17 Detected hydrocarbons in the diesel range do not have a distinct diesel pattern and may be due to heavily weathered diesel or possibly biogenic interference.
- J Estimated value.
- Q-03 The percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte already present in the sample.
- Q-06 Analyses are not controlled on RPD values from sample concentrations less than 5 times the reporting limit.
- R-03 The reporting limit for this analyte was raised due to matrix interference.
- R-05 Reporting limits raised due to dilution necessary for analysis. Sample contains high levels of reported analyte, non-target analyte, and/or matrix interference.
- S-09 Surrogate recovery is outside control limits due to matrix interference.
- U Analyte included in the analysis but not detected.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

### Notes and Definitions

- D Data reported from a preparation or analytical dilution.
- J Estimated value.
- Q-06 Analyses are not controlled on RPD values from sample concentrations less than 5 times the reporting limit.
- U Analyte included in the analysis but not detected.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
